Conditional Statements : A conditional statement in python is used to make decisions based on a condition.

→ If the condition is True, a particular block of code will execute if condition is False, another block of code may execute.

Types of conditional statements :

1. if statement : The if statement executes a block of code only when the condition is True

Syntax : if (condition):
    print()

2. If else statements : Executes one block of code if the condition is True & another block if the condition is False.

Syntax : if condition:
    statement1
  else:
    statement2.

3. If-elif-else statement : It is used to check multiple conditions and execute the block associated with the first condition that is True.

Syntax : if condition1:
    statement1
  elif condition2:
    statement2
  elif condition3:
    statement3
  else:
    statement4

4. Nested if statement : A nested if statement is an if statement written inside another if statement.

Syntax : if condition1:
    if condition2:
        statement.

5. Nested if-else statement : if-else statement contain an if-else statement inside another if or else block.
