Loops: A loop is a programming concept used to execute a block of code repeatedly until the certain condition is met or the sequence is completed.

Types of loops in python.

* for loop
    1) for loop with sequence
    2) for loop with range
* while loop
* nested loop.
    1) for loop inside for loop.
    2) for loop inside while loop.
    3) while loop inside while loop.
    4) while loop inside for loop.

1) for loop: A for loop is used to iterate over a sequence such as a list, string or range of numbers.

Syntax: for variable in sequence:
    statements.

28/10/2026.

→ for loop with range

Syntax: for variable in range (startvalue, stop value, step size):
    statements.

ex: for loop.

1) name = "sangana vp"
for i in name:
    print (i, end = "\t")

2) for i in range (1, 11, 1):
    print ("i=", i)
    print ("Hello good morning")
